

VOISS-Net: Installing Jupyter Notebook (Ubuntu / WSL Guide)

1. Activate the VOISS-Net Conda Environment

```
conda activate voiss-net
```

2. Install Jupyter Notebook

```
conda install jupyter
```

3. Start Jupyter Notebook

```
3.1: jupyter notebook
```

```
3. 2: jupyter notebook --no-browser --ip=0.0.0.0 --allow-root
```

This will generate a URL containing a **token**, shown in the terminal (e.g., ?token=xxxx).

4. Open Jupyter in Browser

Copy the generated URL and replace 0.0.0.0 with 127.0.0.1 (localhost):

```
http://127.0.0.1:8888/?token=xxxx
```

5. Testing Jupyter

Test Jupyter:

```
print("Jupyter is working!")
```
